IT ALL BEGAN WITH A SIMPLE IDEA

to produce the most cost-efficient and trouble-free water heater – the best storage heater. Every year, we think we are close enough to our goal. And yet, every year we produce more sophisticated water heaters, storage tanks and heating elements, ...

Maximum user comfort, energy efficiency and environmental responsibility are the main driving forces in our daily work.

DRAŽICE: END-TO-END SOLUTIONS

Although DZD is particularly famous for the manufacture of electric water heaters, our product range is actually much wider and covers all modern heating requirements:

■ Water heaters

- Electric
 - ▶ Storage water heaters
 - ▶ Continuous flow water heaters
- For gas boilers
- For photovoltaic systems
- For thermal solar systems
- For solid fuel, wood, biomass boilers and fireplace inserts with a heat exchanger
- For heat pumps

■ Storage tanks

■ Heating units

■ Indoor units for heat pumps

■ Air conditioning units and heat pumps

DRAŽICE: RENOWNED CZECH BRAND

DZD is a Czech manufacturer of water heaters and hot water storage tanks offering a truly wide range of products under the renowned brand name Dražice. We are proud that the vast majority of our component suppliers come from the Czech Republic and Slovakia, namely:

- Heart from Dražice
- Pipes from Brno
- Plastics from Zlín
- Ceramic components from Šumava
- Relief valves from Myjava
- Steel from Košice

DRAŽICE: HEAVY DUTY WATER HEATERS

DZD water heaters are typically heavier than those of our competitors. The reason for this is their unique technical design.

- The steel used is of a greater thickness, which increases both pressure and corrosion resistance.
- The PU insulation has a minimum thickness of 42 mm, making the thermal conductivity values extraordinarily low.
- The ceramic body in the enamelled sump is heavy, but enables easy replacement and offers high heat resistance.
- Thick-walled sleeves with a 3/4-inch cross-section are used as standard, resulting in improved water flow in l/min.

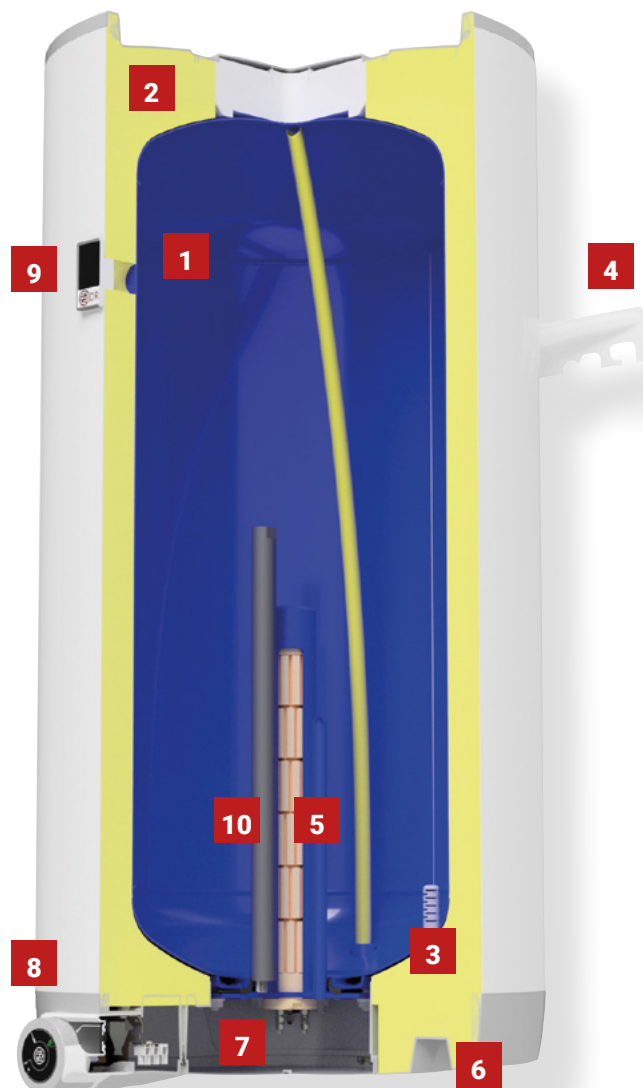

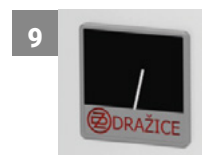

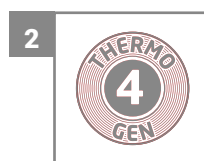

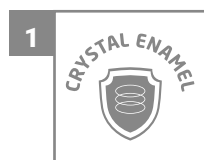

DRAŽICE: SERVICE IS OUR HIGHEST PRIORITY

- Some of our customers have been using their water heaters for more than 20 years. We do our best to make sure that they can be repaired quickly and easily, even after the warranty period, and that they do not have to be replaced.
- You can always contact us by phone on +420 326 370 911 or by e-mail at info@dzd.cz.
- We have more than 1,000,000 satisfied customers, with that number steadily growing. If you are unable to reach us immediately, please rest assured that we get back to all potential customers who have reached out to us. Please bear with us.
- We maintain the largest network of service partners in the Czech Republic. These are trained professionals with a strong relationship to high quality Czech products. Every year, we hold meetings with them, listen carefully to their comments and ideas, and improve accordingly.

AS A RESULT OF THE EMPHASIS WE PLACE ON INNOVATION

and the sustainability of our packaging, we have won the Packaging of the Year (in Czech: Obal roku) competition three times in a row. We do our best to replace polystyrene with cardboard as much as possible. All the cardboard used in the packaging of Dražice products contains recycled paper. Where this is not possible, we use polystyrene with a recyclate admixture. We even run our own joinery shop that makes pallets and protective slatting especially for larger and more complex custom-made orders.

BENEFITS OF WATER HEATERS MADE IN DRAŽICE

1

CRYSTAL ENAMEL

- Unique formula that is a trade secret.
- The high quartz content and firing at high temperatures ensures extended heater service life.
- Hygienic safety acknowledged and certified by leading European test laboratories.

2

THERMO GEN® THERMAL INSULATION

- 4th generation PUR foam insulation ensures compliance with the most stringent EU legislation for the manufacture of heaters in energy classes A/B/C.
- Minimum insulation thickness of 42 mm.
- Combined features generate substantial savings on water heating costs.

3

WATER SEPARATOR

- Prevents hot and cold water mixing when hot water is drawn into a building's water system.
- Unique design developed in cooperation with the Technical University of Liberec.
- Manufactured from plastic that resists high temperatures, limescale build-up and complies with hygiene safety standards for contact with drinking water.

4

UNIVERSAL MOUNTING BRACKET

- Covers most anchoring positions for water heaters offered by market competitors; existing bolts can be re-used.
- Unique and versatile design developed in cooperation with the Technical University of Liberec.
- Enables installation with minimum space requirements.

5

CERAMIC SOLUTION® CERAMIC HEATING ELEMENT

- Heating element placed in sump to prevent contact with heated water.
- Galvanic potential of enamelled sump equal to that of the vessel, making it less susceptible to corrosion.
- Slower body degradation when compared to bodies placed directly in water.
- Power output of 2.2 kW guarantees fast hot water heating.
- Easy replacement of body in case of failure without the need to drain the water.

6

MOUNTING GRIPS

- Recesses in the top and bottom plastic lid.
- Enable easier handling during installation.

7

SERVICE OPENING

- Sizeable service opening; a feature of all Dražice water heaters.
- Enables easy maintenance and cleaning; removal of limescale and other contamination.
- Timely and regular cleaning extends the service life of water heaters by up to one-third.

8

TEMPERATURE CONTROL

- Temperature adjustment of the water in the heater as required.
- ECO setting; ensures plenty of hot water while reducing limescale build-up and stress on the vessel, which extends the service life of the water heater.
- Frost protection setting; can be selected when no hot water is needed for a longer period of time.

9

TEMPERATURE INDICATOR

- Indicates the approximate temperature of the water in the storage tank and if there is enough water.
- Enables easy detection of faults.
- Exact temperature indication of the water in the storage tank when a storage tank with electronic temperature display is installed.

10

PROTECTIVE ANODE

- Each storage tank is equipped with a magnesium sacrificial anode that is larger than that in conventional products manufactured by our competitors.
- Protects the enamel from micro cracks and prevents corrosion, which extends the service life of the storage tank.
- Larger anode size extends the anode replacement frequency.
- Timely replacement extends the service life of water heaters by up to one-third.

11

RELIEF VALVE

- Features in all Dražice storage tanks with a volume up to 250 litres; working pressure of 6.5 bar.
- Unique design enables easy replacement of non-functional part; valve body forms a fixed part of the supply line.
- Properly functioning valves extend the service life of storage tanks.

12

SMART EVO 3 THERMOSTAT

- Self-learning function; guarantees hot water preparation in the volume you need when you need it.
- Enables control of water heating via a smartphone; generates statistics about the water heating process.
- Ripple control function; detects cheaper electricity rate.
- Selection of water heating modes - manual, holiday, legionella elimination, frost protection, etc.
- Combined features can generate up to 15% savings on water heating costs.

LOW-PRESSURE FLOW HEATERS

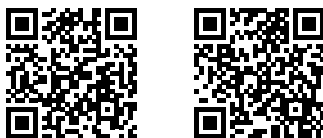

PRESSURE FLOW HEATERS

LOW-CAPACITY PRESSURE
AND LOW-PRESSURE STORAGE TANKS

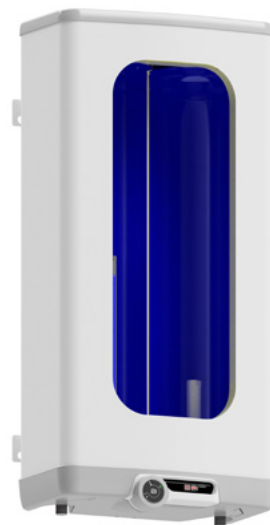

- New flat heater in models 50–100
- Suitable for installation in restricted areas, it can be built in the kitchen line; **Horizontal installation possible**
- Quick water heating due to the concept of two vessels
- It combines the traditional DZD technology and modern design
- Possible alternatives to the replacement of the gas heater
- New electronic thermostat

SOCKET no. 1 ¾" outer

- In models 125 and 160
- Produced as wall-mounted
- In version with 1.4 m² exchanger, the storage tank is suitable for boilers that run on various fuels, for condensing boilers and some heat pumps
- 1 wall-mounted console and support for model 125; 2 wall-mounted consoles for model 160
- Equipped with inlet/outlet for circulation
- Inlets and outlets of all media through the bottom lid for easier connection
- Control for heating control by the exchanger not included

NEW

- The upper heat exchanger heats the hot water only in the upper part of the storage tank, while the lower part is always ready to store the energy from the sunshine
- The upper heat exchanger allows the hot water to be reheated using an existing heat source (gas, solid fuel or biomass boiler)
- TJ ¾" electrical heating unit can be installed
- TPK electrical heating unit can be installed in the bottom flange

- Space-saving design
- In the upper part of the heater there is an enamelled water heater with a heat exchanger
- In the lower part there is an equalizing storage tank for the heating circuit
- Energy efficiency class „B“
- Heat exchanger with a heat exchange surface area of 3.2 m² for a heat pump or a low-temperature source
- The heating unit can be installed in the side flange – see in the accessories table on the end of catalogue
- Model 200 have a removable thermal insulation

HOT WATER STORAGE TANKS

FLOOR-STANDING INDIRECT HEATING

- Working pressure in the vessel and in the heat exchanger is 1 MPa
- With two heat exchangers, the upper large heat exchanger for connection heating sources (heat pump, low-temperature source) and bottom exchanger (eg solar)
- Installation of TJ ¼" electrical heating nit possible
- Installation of TPK 150-8 electrical heating unit possible
- Storage tank includes 3 sensor pockets

- Water heater supplied with a cable and mains plug and is easy to operate
- Built-in heating unit with an output of 1000 W
- Power output can be increased to 3000 W by connecting to 400 V
- Vertical installation possible by hanging it on supplied console;
horizontal installation on own construction
- Suitable for areas with soft and medium-hard water (up to 2.5 mmol/l),
i.e. particularly in mountain areas

wall-mounted version

floor-standing version

- Efficient hot water preparation with high COP (up to 3.69)
- Hot water temperature 60°C (compressor only)
- Hot water preparation for 4 or more persons
- Up to 70% of the energy needed for hot water preparation is recovered from exhausted air
- Remote control from a superior system via Modbus protocol
- Ventilation control possible with an analogue signal 0-10 V from a humidity or CO₂ sensor
- Effective dehumidification of the indoor air and prevention of mould growth
- Device can be combined with solar heating (FS variant) with integrated heat exchanger

ACCESSORIES

IPS - IONIZATION POLARIZATION SYSTEM

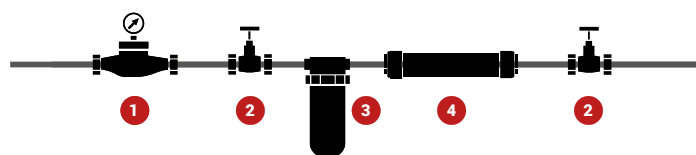

Equipment for the physical treatment of water in connection with the reduction of limestone for the protection of household appliances and water distribution systems

ADVANTAGES

- It prolongs the service life of heating equipment and sanitary equipment
- No external power supply
- Maintenance free
- Zero additional costs
- It does not use any chemicals
- Negligible pressure losses
- Patented product
- Certified effectiveness
- Blue line - suitable for all Types of water supply, in addition it contains disinfectants, suitable e.g. for untreated water sources
- Red line - suitable for all Types of water supply

STORAGE TANKS

Accumulation tanks for the accumulation of thermal energy from various heat sources.

We manufacture a lot of types of storage tanks for various combinations and types of use.

The basic division is as follows:

- storage tanks without hot water preparation NAD, NADS and UKV
- storage tanks with hot water preparation NADO and NADOS

More information can be found at www.dzd.cz/en/akumulacni-nadrze.

NAD 250 v1

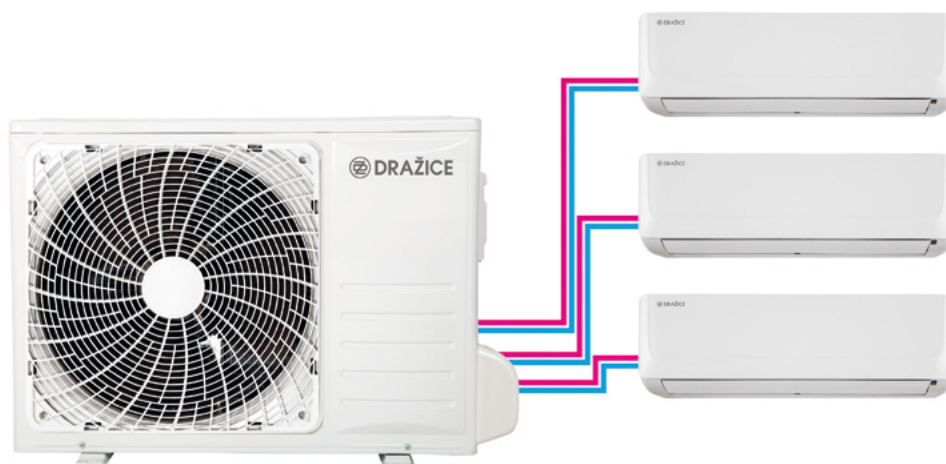

NADO 500/140 v1

SPLIT AIR is an air conditioner with one indoor unit designed for flats, family houses, offices or smaller facilities. The air conditioner consists of an outdoor unit, one indoor unit and a smart remote controller. All three performance variants of the AIR air conditioner offer cooling, heating, a fan and drying functions.

The Multisplit AIR PLUS air conditioners are designed for systems with a requirement for more indoor units. In this solution, one suitably dimensioned outdoor unit is supplemented by two to four indoor units of identical or different outputs so that the requirements of the project are optimally met.

By combining three types of outdoor units and four types of indoor units, practically any configuration of cooling and heating systems can be achieved exactly according to your needs.
